

LITECERT

Secure credentials, verified forever.

Cardano-native certificate infrastructure for institutions, graduates, and employers — issue once, verify anywhere.

Daniel Mwihoti · Founder & CEO · Nairobi, Kenya

Genesis · DraperU × Cardano Pre-Accelerator · 2026

Credentials are still easy to fake and hard to trust.

Fraud & forgeries

Paper and PDF certificates are routinely fabricated. Employers and universities waste time on manual checks.

Central databases fail

Issuer portals go offline, change URLs, or get compromised. Verification depends on a single institution's systems.

Slow & expensive checks

Background checks and transcript requests take days or weeks — especially across borders and for African talent globally.

Privacy tension

Holders shouldn't dump full personal records on a public chain. Verifiers still need cryptographic proof of authenticity.

LiteCert: issue once. Verify forever.

Cardano-native infrastructure that lets institutions mint tamper-proof certificate NFTs and lets anyone verify authenticity in seconds — without trusting a central database.

1

Institutions

Wallet-connected issuance, batch Excel upload, logos, revocation, issuer archive copies.

2

Holders

Share a public verify link or receive the official certificate NFT in their Cardano wallet.

3

Employers

Instant public verification by certificate number or unique ID — valid, revoked, or expired.

From issuance to verification in five steps.

01

Reserve job

Institution creates a durable issuance job in Neon Postgres.

02

Mint NFT

Certificate SVG pinned to IPFS; CIP-721 NFT minted on Cardano.

03

Anchor hash

Only hashes & IDs go on-chain — not raw personal data.

04

Deliver

Share verify link or transfer official NFT to holder wallet.

05

Verify

Anyone checks status against app record + Cardano anchor.

Live MVP built for real institutional workflows.

What ships today

- Institution portal + batch Excel issuance
- Certificate NFT mint (CIP-721 + IPFS image)
- Public verify by cert # or unique ID
- Durable issuance jobs (idempotent recovery)
- NFT transfer + issuer archive copy
- Revocation path (app + optional Aiken registry)
- Midnight ZK privacy layer (in progress)

Technical stack

App	Next.js · TypeScript · Neon Postgres
Cardano	MeshSDK · Blockfrost · CIP-721
Contracts	Aiken registry · Midnight Compact
Storage	Pinata / IPFS for NFT images
Demo	certified-chain.vercel.app

Built for credentials that must outlast institutions.

Low fees at scale

Institutions issue thousands of certificates. Cardano keeps per-credential cost practical.

Durable public record

Hashes and IDs settle on a reliable L1 — verification doesn't die with a vendor portal.

Privacy with Midnight

Prove validity, credential type, or non-expiry with ZK — without dumping PII on-chain.

Real-world Africa fit

Cross-border talent and education need portable proof. Cardano's open network matches that.

Education & workforce credentials are a global trust gap.

Africa-first

Beachhead: universities, bootcamps & training orgs in Kenya expanding regionally.

Ed + HR

Buyers: institutions that issue at volume; value for employers who must verify fast.

Global verify

Diaspora & cross-border hiring need portable proof employers can trust in seconds.

Go-to-market: start with education & professional training issuers in Kenya → expand to employers and multi-country networks. Monetize per certificate + institution SaaS, not token speculation.

Simple B2B pricing. No token required to start.

Starter

Per cert

- Pay-as-you-issue
- Public verify
- NFT delivery
- Ideal for pilots

Institution

SaaS + volume

- Monthly plan
- Batch issuance
- Branding & logos
- Revocation tools

Enterprise

Custom

- SSO / API
- SLA & support
- Private workflows
- Midnight ZK proofs

Pre-seed. Product-first. Honest status.

MVP on Vercel

3

Core team, Nairobi

What we've built (not vaporware)

- Working end-to-end flow: institution issue → Cardano NFT/hash → public verify
- Production-oriented stack: Neon, durable issuance jobs, CIP-721 NFTs, IPFS images
- Privacy roadmap: Midnight ZK circuits for selective disclosure (validity, type, non-expiry)
- Next: paid pilots with education/training institutions in Kenya

Three builders in Nairobi. Cardano-native.

Daniel Mwihoti

Founder & CEO

Full-stack / Web3. Ships production SaaS & Cardano products (MeshSDK, CIP-721, Aiken, Midnight). Ambassador, Blockchain Centre NBO. Product + on-chain architecture for LiteCert.

Kelly

Backend Engineer

Robust APIs, data models, and institution workflows. Cardano community contributor; volunteered at Cardano Tech Summit.

Pascal

Frontend Developer

Institution portal and verification UX so non-crypto users — registrars, employers, graduates — can issue and verify without friction.

THE ASK

Join Genesis to turn a live Cardano MVP into a company.

Company building

4 weeks in Silicon Valley: GTM, pilots, narrative, fundraising readiness.

Network

Mentors, Draper VCs, Cardano ecosystem intros, demo day.

Capital path

Potential up to \$20k investment offer from Draper Dragon.

What we bring

Working product, Cardano depth, Nairobi execution, visa-ready founder.

LITECERT

Let's issue trust on Cardano.
